Ready to use rodenticide bait for the control of rats and mice in and around buildings, in open areas, waste dumps and sewers.

INGREDIENTS: Contains 0.05 g/kg Bromadiolone and 0.01 g/kg human bittering agent Denatonium Benzoate in the form of a bait.

WARNING: Repeated or prolonged oral exposure to high doses may cause damage to the blood system. Designed for biocidal action.

PRECAUTIONS: Keep out of reach of children. Read and understand instructions before use. Wear gloves and avoid skin contact. Wash hands and exposed skin after handling. Avoid contamination of any water supply with product or empty container. Do not place baits in places accessible to children, pets, domestic animals, livestock, birds or where farm animals may have access to baits. Protect bait from atmospheric conditions by using in a bait station. Ensure bait stations are not placed where they may be flooded from nearby water sources and drainage.

FIRST AID: If swallowed do not induce vomiting. Immediately seek medical advice or contact the National Poisons Centre on 0800 764 766. Have product label to hand. DO NOT breath dust. If ON SKIN wash with soap and water.

Treatment of domestic animals: Vitamin K1 is an effective antidote against accidental poisoning. Note to Doctors and Veterinarians: Bromadiolone is an anticoagulant compound which if ingested by humans, domestic animals, or pets, can reduce the clotting ability of the blood and haemorrhage may result. Vitamin K1 should be administered urgently. If administered intravenously the injection must be given slowly.

STORAGE: Store tightly closed in the original container in a locked, dry, cool area away from direct sunlight and foodstuffs.

DISPOSAL: Before disposing, wrap any untaken or unused baits in a plastic bag and ensure container is completely empty. Do not use container for any other purpose. Dispose of in the garbage or as required by local regulations. Dispose of any carcasses by burial or by wrapping in paper, placing in a plastic bag, and putting in the garbage.

DIRECTIONS FOR USE:

- Eliminate as many alternative food sources as possible.
- Human odours may deter rodents, wear gloves when handling bait.
- Place baits under cover, along walls or rafters and in dark sheltered areas where there are signs of rodent activity.
- For mice - use single bait blocks 5 m apart, or 2 m apart for high infestations.
- For rats - use 1 to 3 blocks 10 m apart, or 5 m apart for high infestations.
- Inspect baits at least every 7 days.
- For effective control continue to replace eaten bait until feeding ceases. Once rodent activity has ceased ensure untaken baits are removed and safely disposed of (see Disposal). NOTE: A single NO Rats & Mice Eliminator Bait Block is sufficient to kill a rat or mouse, but they will continue to eat bait for a few days before death.
- It may take up to 2 weeks to control a significant rodent problem.
- If bait consumption is low relative to the apparent size of the infestation, consider changing position of bait points and alternating with another bait such as NO Rats & Mice Bait Blocks.
- Fix bait stations in place.

Protect all pets, livestock and non-target animals

BY LAW this product must only be used in a bait station and as specified on the label.
